Additional Comments

We had an older CO2 Laser which did not have superpose, therefore we experienced plenty charing. Overall great lectures and dissection and venue

It will be great if we have more senior observation and hands-on help during dissection. If possible to try to use other type of laser like KTP for example. It was an honour for me to be taught under the hands of laryngology pioneers.

Consider to have just one anaesthetist covering the subjects. Our laser was not super good and gave a lot of charing but I have immensely enjoyed the course. Will definitely recommend the course to my colleagues.

The subjects of the lectures on the first day should be organised much more because some information were doubled. There were not so many videos.

Slides & videos on USB

More attention during dissection time. On our table dissection, not so much time dedicated by tutors.

The course is fantastic. I really enjoyed it and will 100% recommend it!

Excited by these lectures and enthused to continue to modernise and update my practice

Observer to the course. Lectures were informative and recap helped reinforced the message. Discussion during the lectures raised so many points including alternative ways to manage complex patients. Mr Watson and Mr Karagam explained especially well, broke down steps in a logical way.

A good selection of lectures and dissection. Perhaps a lecture on how to manage an airway would be helpful.

Mr G lectures not up to expectations. Laser need more time

KM was intended to give the world's fastest lecture. She was not bothered if we understand or not. KG a wrong picture of CTR. CS totally changed the idea about the CTR. He was the best. Please select the lecturers wisely. Speed does not matter!

Problems we discussed was interesting. I have no experience of laser so that was too short and with too many information on faculty about laser. Anyway discussion in the meantime was very helpful and interesting.
