Additional comments

- Excellent to inform clinical practice
- Maybe add: Web, larynx trauma (when to operate and how), papilloma, fellowship.
- Consider a 2-day course to fit everything in. Unnecessary with 3 lectures on the same subject (injection). It would have been nice if all delegates introduce themselves. Clinical fellowship phoniatics.
- Very well organised. Met my expectations.
- More topics like muscle tension dysphonia & management of functional aphonia would be helpful.
- Please make it a two-day conference. First day for lectures, second day for dissection and bring along drills for thyroplasty.
- Better to have a mention about whether it is a basic, intermediate or advanced course.
- Techniques of phonosurgery - photos of instruments would have been very helpful. Spasmodic dysphonia - diagnosis / video stroboscope would have been useful.
- Very good. Surprisingly informative.
- Phil Jones's talk lacked picture / illustrations to show the statements and points in the slides.
